

Purex PC-5 Tablets

- ✓ Effective alternative to chlorine for the fast treatment of contamination in pool water
- ✓ Simplest, fastest and safest way to introduce Chlorine Dioxide into a pool
- ✓ Individually sealed tablets in a specially designed long life vac pack
- ✓ Simply Toss and Go

Purex PC-5 Tablets

Price Chemicals introduce new formula in the fight against Cryptosporidium. PC-5 Tabs are an effective alternative to chlorine for the fast treatment of contamination in pool water.

NSW Health recommend treatment of loose fecal incidents or vomiting (the greatest causes of contamination of pool water with Cryptosporidium oocysts) with either chlorine at 20 ppm for a CT period of 12.75 hours or alternatively Chlorine Dioxide at 1 ppm for a CT period of only 70 minutes.

Price Chemicals now provide a viable alternative to closing your facility for lengthy periods.

PC-5 Tabs are the simplest, fastest and safest way to introduce Chlorine Dioxide into a pool.

NO CHEMICAL MIXING – NO MESS

Each PC-5 Tab is individually sealed in a specially designed long life, vac pack to ensure it maintains efficacy over a long shelf life. Convenient for keeping on hand in case of emergency.

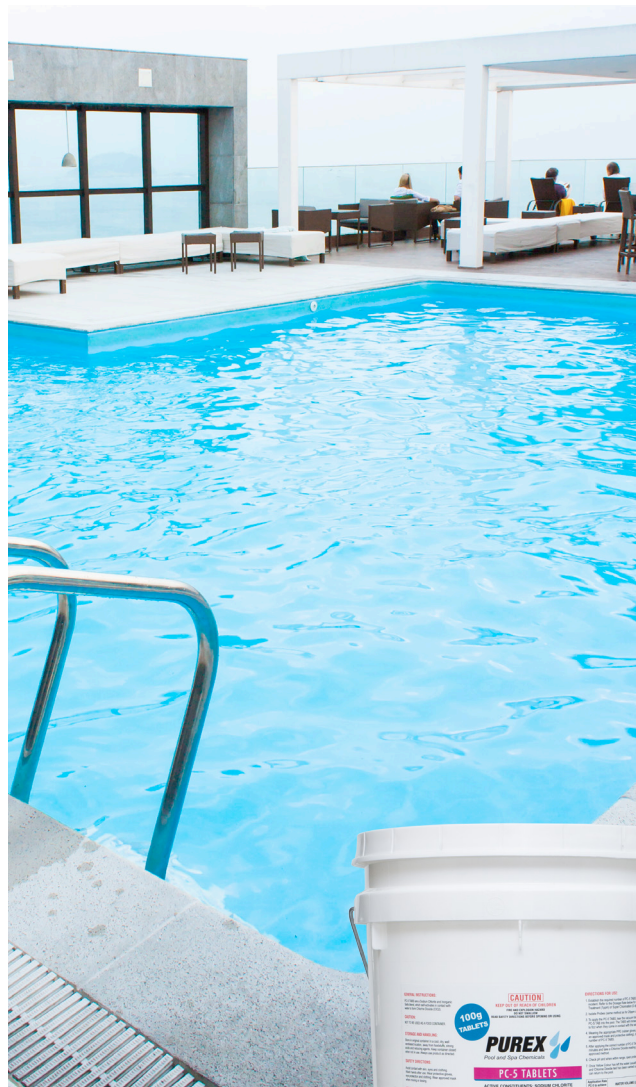

Simply calculate the number of tabs required from the easy to follow instructions, peel the packs and throw the tabs into the pool, gutter or balance tank.

Self-activating as soon as they contact the water, each specially formulated PC-5 precursory tab can treat 10,000ltrs. to achieve 1 ppm of Chlorine Dioxide.

SAVE TIME & MONEY & KEEP CLIENTS

Although it is recommended to isolate probes prior to treatment, there is no requirement to adjust Chlorine levels or use neutralisers after treatment.

This means your pool can re-open in the fastest possible time. This also saves you valuable time and money and assists in maintaining your excellent reputation with patrons.
