

# SX POOL & SPA BLOWER

- ✓ Powerful two stage motor designed for high pressure air
- ✓ Option air switch operation
- ✓ Unique design to lower noise and keep moisture out
- ✓ Suitable for outdoor swimming pool and in-ground spa applications

# SX POOL & SPA BLOWER

## ENHANCE YOUR POOL OR SPA

Air blowers mix the air and your Pool or Spa water to create a relaxing environment. It works by creating air flow and then channelling that air through a pipe plumbed system that is connected to jets in your pool or spa. An air blower is also sometimes referred to as an air pump or a bubbler, because it creates bubbling in the spa water. There are two common Spa blower setups that pool builders use.

### Air Channels

This setup requires a series of holes drilled into the spa - usually at the seats and floor. The spa would be installed with a pipe channel system where by the air from the spa blower is then channelled to these holes.

### Air Injectors

In this method, air is ported to individual "jets". This is connected to fittings in the seat area or floor. Each of these fittings has an individual air supply going to it.

## ULTIMATE RELAXATION

AstralPool's Pool & Spa 1200w 2 stage single speed air blower will deliver a strong and reliable massage, creating the ultimate relaxing sensation.

## POWERFUL PERFORMANCE

This powerful two stage motor is designed for high head performance. It is also EMC suppressed, to achieve whisper quiet operating levels for your spa.

## TECHNICAL INFORMATION

Model	Product Code	Power	Type	Plug	Connection	dBA	Amps
